

ARGOS - Investment Log 2019-2026

Public buyer file - simplified English summary of the main investments and works.

English buyer version. This public document is an English summary/adaptation for international buyers. The French source documents and signed sale documents remain authoritative.

Investment Logic

ARGOS has received significant improvement and maintenance work between 2019 and 2026. The public budget file uses an indicative historical reading around 20,000 EUR of investments over seven years, while future planning separates recurring costs from larger one-off works.

Main Documented Areas

- Electrical autonomy: solar, lithium battery bank and energy management.
- Onboard comfort: living spaces, equipment, bedding and practical fittings.
- Navigation and technical equipment: maintenance, checks and replacements where needed.
- Hull and underwater works: last careening, anodes and related maintenance documented in the invoice file.
- Steering system: important rudder and steering works carried out in May 2024.
- Propulsion underwater equipment: new propeller documented in the recent invoice/works file.

2029 Planning Consequence

Because major works on the rudder and steering system were completed in 2024, the 2029 line for shaft, propeller and rudder is presented mainly as a check and possible small intervention, not as a planned full rebuild.
