

ARGOS - Survey & Consumption References

Public buyer file - 2019 survey reference, fuel, energy and maintenance reading.

English buyer version. This public document is an English summary/adaptation for international buyers. The French source documents and signed sale documents remain authoritative.

Survey Reference

ARGOS has a reference survey from 2019. The next full hull reading is grouped with the 2029 maintenance cycle: hull survey, ultrasound thickness plan and underwater checks during haul-out.

Fuel Consumption

The working fuel reference used in the buyer file is approx. 2.5 L/hour. At 2 EUR/L, this gives the following planning references:

Use scenario	Navigation hours	Diesel budget
Limited use	50 h/year	approx. 250 EUR
Reference use	150 h/year	approx. 750 EUR
Sustained use	300 h/year	approx. 1,500 EUR

Energy And Everyday Use

- Solar panels and lithium battery bank support autonomous use.
- Port electricity and water are variable and depend on use.
- Heating costs depend heavily on season, onboard occupation and comfort expectations.
- The major hull and underwater cycle is intentionally grouped around 2029 rather than split across 2027.

Local sources: survey/consumption document, budget estimates and maintenance calendar.
